PROFILE SUMMARY

AI/ML-focused computer science graduate with hands-on experience in Python-based machine learning research, medical-image classification, data preprocessing, model training, and evaluation. Built a CNN-based Alzheimer's disease detection model using 6,000+ MRI scans, applying five-fold cross-validation and achieving 92% accuracy. Also experienced in integrating LLM-based automation into business workflows using Python, FastAPI, and Gemini.

TECHNICAL SKILLS

Programming & Data: Python, SQL, NumPy, Pandas, Matplotlib
Machine Learning: Supervised learning, classification, model evaluation, cross-validation, performance analysis
Deep Learning & Vision: TensorFlow, CNNs, image preprocessing, data augmentation, OpenCV
GenAI & NLP: Gemini API, prompt engineering, structured extraction, LLM workflow integration
Data & Retrieval: Feature/data preparation, embeddings, vector similarity search, ChromaDB, Qdrant
Tools & Platforms: Scikit-learn, Jupyter, Git, Google Cloud Vertex AI

RESEARCH EXPERIENCE

Alzheimer's Disease Detection from MRI Scans *Python, TensorFlow, OpenCV*

- Developed a CNN-based medical-image classification pipeline using 6,000+ MRI scans, with preprocessing and augmentation to prepare image data for model training.
- Evaluated model performance using five-fold cross-validation and iterative model tuning; achieved 92% classification accuracy.
- Contributed to research accepted for publication by Springer, documenting the experimental approach and model results.

PROFESSIONAL EXPERIENCE

MiClient Private Limited – Full Stack Developer Intern with AI *Hybrid — Apr 2026–Present*

- Implement Python/FastAPI and Gemini-powered workflows that classify incoming email inquiries, extract structured business information, and support automated client-processing pipelines.
- Developed an activity-to-task pipeline that groups company activity records, prepares AI prompts, parses structured outputs, and persists generated tasks and processing metadata.
- Integrated AI services with Node.js application workflows and MySQL persistence, including scheduled execution and processing-state tracking to reduce repeat processing.
- Implemented a Qdrant-based similarity-search workflow over MySQL-backed product and client data to retrieve relevant records for AI-assisted Quick Deal generation.

SELECTED PROJECTS

GenAI Document Question Answering (RAG) *Python, LangChain, ChromaDB*

- Built a retrieval-augmented question-answering pipeline using document chunking, embeddings, vector similarity retrieval, and LLM-generated responses grounded in retrieved context.

Retail Sales Analytics *Python, Pandas, MySQL*

- Queried and analyzed relational sales data with 25+ SQL queries, including JOINs, CTEs, and window functions, to derive business-oriented summaries.

EDUCATION

Vellore Institute of Technology – B.Tech, Computer Science & Engineering (Health Informatics)
Sep 2022–2026 **CGPA: 8.26/10.0**

CERTIFICATIONS & LANGUAGES

Google Cloud – Generative AI Virtual Internship (SmartBridge)
— AWS Academy – Cloud Foundations — English, Hindi; Japanese (learning)
