PROFILE SUMMARY

Computer Science graduate with hands-on experience developing and debugging web applications, backend services, REST APIs, and database-driven workflows. Comfortable working across JavaScript, Python, Node.js/Express, FastAPI, MySQL, and API contracts, with practical experience integrating services, handling structured data, and automating business processes. Built skills through independent projects and implementation work in a live SaaS product, combining software engineering fundamentals with applied AI-service integration.

EDUCATION

Vellore Institute of Technology – B.Tech, Computer Science & Engineering (Health Informatics) *Sep 2022–2026*
CGPA: 8.26/10.0

TECHNICAL SKILLS

Programming: Python, JavaScript, C++, SQL
Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, JSON, OpenAPI/Swagger
Frontend: React, Next.js, HTML, CSS
Databases: MySQL, Sequelize, Microsoft SQL Server
Engineering Tools: Git, GitHub, Docker, Swagger UI
Additional Technologies: Gemini API, Qdrant, LangChain, ChromaDB, Pandas, NumPy, TensorFlow, Scikit-learn

EXPERIENCE

MiClient Private Limited – Full Stack Developer Intern with AI *Hybrid — Apr 2026–Present*

- Develop and debug SaaS features across React/Next.js, Node.js/Express, Sequelize, and MySQL, working across frontend behavior, backend logic, REST API integration, authentication/authorization, and persisted application data.
- Designed and implemented an API-first frontend approach using Next.js App Router; defined OpenAPI/Swagger endpoints and request/response schemas, and validated API contracts through Swagger UI.
- Implemented backend workflows for IMAP-based email ingestion, scheduled processing, and database persistence; investigated issues by tracing request behavior, application logs, database state, and service interactions.
- Integrated Node.js business workflows with Python/FastAPI AI services, handling structured JSON outputs and connecting generated results to client creation, activity-to-task automation, and deal-generation workflows.

PROJECTS

Healthcare Appointment Scheduler *JavaScript, Node.js, Express, MySQL, REST APIs*

- Developed a web application with authentication, REST endpoints, and MySQL-backed appointment workflows.
- Worked across client-side interfaces and server-side request handling to connect user actions with persisted application data.

Retail Sales Analytics Pipeline *Python, MySQL, Pandas, SQL*

- Designed data-cleaning and transformation workflows using Pandas and relational data.
- Wrote 25+ analytical SQL queries using JOINs, CTEs, and window functions to examine sales data and derive business insights.

GenAI Document Question Answering (RAG) *Python, LangChain, ChromaDB, Embeddings*

- Built a retrieval-augmented document QA pipeline using document chunking, embeddings, similarity retrieval, and LLM-based response generation.
- Structured the pipeline into reusable processing stages to connect document context with question answering.

Alzheimer's Disease Detection using CNN *Python, TensorFlow, OpenCV*

- Processed 6,000+ MRI scans with preprocessing and augmentation, and evaluated a CNN using 5-fold cross-validation and hyperparameter tuning.
- Achieved 92% classification accuracy; research accepted for publication by Springer.

CERTIFICATIONS & LANGUAGES

Google Cloud – Generative AI Virtual Internship (SmartBridge)
— AWS Academy – Cloud Foundations
— English, Hindi, Japanese (Learning)
